Understanding How We Learn Feb 09 2021 Educational practice does not, for the most part, rely on research findings. Instead, there's a preference for relying on our intuitions about what's best for learning. But relying on intuition may be a bad idea for teachers and learners alike. This accessible guide helps teachers to integrate effective, research-backed strategies for learning into their classroom

practice. The book explores exactly what constitutes good evidence for effective learning and teaching strategies, how to make evidence-based judgments instead of relying on intuition, and how to apply findings from cognitive psychology directly to the classroom. Including real-life examples and case studies, FAQs, and a wealth of engaging illustrations to explain complex concepts and emphasize key points, the book is divided into four parts: Evidence-based education and the science of learning Basics of human cognitive processes Strategies for effective learning Tips for students, teachers, and parents. Written by "The Learning Scientists" and fully illustrated by Oliver Caviglioli, *Understanding How We Learn* is a rejuvenating and fresh examination of cognitive psychology's application to education. This is an essential read for all teachers and educational practitioners, designed to convey the concepts of research to the reality of a teacher's classroom.

*Lesson Study for Learning Community* Nov 20 2021 Lesson Study has been actively introduced from Japan to various parts of the world, starting with the US. Such introduction is heavily connected with a focus on mathematics education and there is a strong misconception that Lesson Study is only for mathematics or science. The introduction is usually done at the departmental or form level and there has been a strong question about its sustainability in schools. This book comprehensively explores the idea of Lesson Study for Learning Community (LSLC) and suggests that reform for the culture of the school is needed in order to change learning levels among the children, teachers and even parents. In order for this to happen, the ways of management and leadership are also included as objectives of LSLC, as are practices at the classroom level. It argues that LSLC is a comprehensive vision and framework of school reform and needs to be taken up in a holistic way across disciplines. Chapters include: How to Create Time How to Build the Team How to Promote Reform How to Reform Daily Lessons How to Conduct a Research Lesson How to Discuss Observed Lessons How to Sustain School Reform based on LSLC Strong interest in LSLC is already prevalent in Asian countries, such as Japan, China, Korea, Taiwan, Indonesia, Vietnam and Singapore and is now being introduced more in the west. This book will be of great interest to those involved in education policy and reform, and for practitioners of education at all levels.

*Aristotle's Physics* Feb 21 2022 Aristotle's *Physics* is one of the least studied "great books"--physics has come to mean something entirely different than Aristotle's inquiry into nature, and stereotyped Medieval interpretations have buried the original text. *Who's Doing the Work?* Mar 13 2021 In their follow-up to *Reading Wellness*, Jan Burkins and Kim Yaris explore how some traditional scaffolding practices may actually rob students of important learning opportunities and independence. *Who's Doing the Work?* suggests ways to make small but powerful adjustments to instruction that hold students accountable for their own learning. Educators everywhere are concerned about students whose reading development inexplicably plateaus, as well as those who face challenging texts without applying the strategies they've been taught. When such problems arise, our instinct is to do more. But when we summarize text before reading or guide students when they encounter difficult words, are we leading them to depend on our support? If we want students to use strategies independently, Jan and Kim believe that we must question the ways our scaffolding is getting in the way. Next generation reading instruction is responsive to students' needs, and it develops readers who can integrate reading strategies without prompting from instructors. In *Who's Doing The Work?*, Jan and Kim examine how instructional mainstays such as read-aloud, shared reading, guided reading, and

independent reading look in classrooms where students do more of the work. Classroom snapshots at the end of each chapter help translate the ideas in the book into practice. *Who's Doing the Work?* offers a vision for adjusting reading instruction to better align with the goal of creating independent, proficient, and joyful readers.
