Resuscitate! Dec 22 2021 Sudden cardiac arrest is the leading cause of death among adults, yet it need not be fatal. Though survival in most communities is very poor, a few communities achieve rates as high as 50%. Why are some communities so successful in snatching life from the jaws of death? Resuscitate! describes the steps any EMS system can take to improve cardiac arrest survival. It is written for the medical directors, administrative directors, fire chiefs, dispatch directors, and program supervisor who direct and run EMS systems all across the country, and for the EMTs, paramedics, and dispatchers who provide frontline care. This second edition of Resuscitate! provides fifteen concrete steps to improve survival. Four steps will lead to rapid improvements at the local level and are relatively easy to implement. Six additional steps are more difficult to implement but also likely to improve survival. The remaining steps recommend changes at the national level. Resuscitate! is the official textbook for the Resuscitation Academy, held twice a year in Seattle. Cosponsored by Seattle Medic One, King County EMS, and the Medic One Foundation, the Academy draws attendees from throughout the world for two intensive days of classes, demonstrations, and workshops to acquire the knowledge and tools to improve survival in their own communities. This new edition includes lessons learned from attendees of the Academy as well as from the faculty's evolving thoughts on how to measure performance and improve survival, one community at a time. It also includes an addendum on the Resuscitation Academy (resuscitationacademy.org). For more than thirty years, Mickey S. Eisenberg M.D., Ph.D., has played a leading role in developing King County, Washington's emergency response to cases of sudden cardiac arrest, a system recognized as among the very best in the nation. He is a professor of medicine at the University of Washington and serves as the medical director of King County Emergency Medical Services.

Markets and Development Nov 08 2020 Markets and Development presents a series of critical contributions focused on the political relationship between citizens, civil society, and neoliberal development policy's latest form. The dramatic increase of 'access to finance' investments, newly gender-sensitive approaches to building neoliberal labour markets, the universal promotion of public-private partnerships, and the 'development financing' of extractive industries, have all seen citizens, social movements, and NGOs variously engaged in, and against, neoliberalism like never before. The precise form that this engagement takes is conditioned by both the perceived and real opportunities, and the risks, of an agenda which seeks to intern 'emerging' and 'frontier markets' deep within a concretising world market, with transformative repercussions for both those involved and, notably, for state-society relations. The contributors to this volume focus on essential aspects of the contemporary neoliberal development agenda and its relationship to and with citizens and civil society, tackling questions related to the roles that various actors within civil society in the underdeveloped world are playing under late capitalism, and how these roles relate to current efforts to establish and extend markets, and market society more broadly, in a neoliberal image. This book was originally published as a special issue of Globalizations.

Strategies to Improve Cardiac Arrest Survival Sep 30 2022 Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.
