Machine Habitus Aug 25 2019 We commonly think of society as made of and by humans, but with the proliferation of machine learning and AI technologies, this is clearly no longer the case. Billions of automated systems tacitly contribute to the social construction of reality by drawing algorithmic distinctions between the visible and the invisible, the relevant and the irrelevant, the likely and the unlikely – on and beyond platforms. Drawing on the work of Pierre Bourdieu, this book develops an original sociology of algorithms as social agents, actively participating in social life. Through a wide range of examples, Massimo Airoidi shows how society shapes algorithmic code, and how this culture in the code guides the practical behaviour of the code in the culture, shaping society in turn. The ' machine habitus ' is the generative mechanism at work throughout myriads of feedback loops linking humans with artificial social agents, in the context of digital infrastructures and pre-digital social structures. Machine Habitus will be of great interest to students and scholars in sociology, media and cultural studies, science and technology studies and information technology, and to anyone interested in the growing role of algorithms and AI in our social and cultural life.

Self-management and Leadership Development May 15 2021 This book is based on a really important, timely and relevant idea to bring together sources on the self-management of leadership development. The book is important because almost all leadership development relies to a great degree on the leader's capability to manage his or her personal development. It is timely because there is currently no single volume that covers the topic; and it is relevant because leadership is such an extremely important issue for the success of our organizations, countries and society in general. The editors have done a thoroughly professional job in identifying top quality authors and combining their contributions into a very worthwhile volume. Ivan Robertson, University of Leeds, UK Self-Management and Leadership Development offers a unique perspective on how leaders and aspiring leaders can and should take personal responsibility for their own development. This distinguished book is differentiated from other books on this topic with its view on the instrumental role played by individuals in managing their own development, rather than depending on others, such as their organization, to guide them. Expert scholars in the area of leadership emphasize the importance of self-awareness as the critical starting point in the process. Explicit recommendations are provided on how individuals can manage their own self-assessment as a starting point to their development. The contributors present insights and practical recommendations on how individuals can actively self-manage through a number of typical leadership challenges. Business school faculty teaching electives in leadership, and managers who engage in leadership development for themselves or others, should not be without this important resource. Consulting firms and training institutions offering leadership development programs and participants in MBA and executive development programs will also find it invaluable.

Biochar for Environmental Management Jun 15 2021 Biochar is the carbon-rich product when biomass (such as wood, manure or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines.

HR Governance Oct 20 2021 Human resource (HR) governance is a relatively new construct that has recently begun attracting more and more attention in both research and practice. As a part of corporate governance, it represents the internal and external normative framework of human resource management and its supervision in organizations. This book theoretically integrates HR governance with the related domains of corporate governance, general management, HR management, and leadership. By doing so, it provides scholars and practitioners in the field with a precisely delineated system of theoretical concepts for their work and helps to translate these concepts into concrete research questions and practical guidelines. By interpreting the new ISO 30408 norm on human governance and taking into account recent developments, the book helps to comply with and anticipate current and future HR regulations.

Management Nov 28 2019 Bateman and Snell have consistently discussed and explained the traditional, functional approach to management through planning (delivering strategic value), organizing (building a dynamic organization), leading (mobilizing people), and controlling (learning and changing). Management: Leading & Collaborating in a Competitive World retains its series of "firsts": first to have a chapter on diversity, first to devote a section to the natural environment, and first to relate a "bricks and clicks" theme to explain the challenges of managing in a New Economy. This new edition is no exception with an emphasis on leadership and collaboration as a means to success. To survive competition and thrive in today ' s world, you must perform in ways that give you an edge over your competitors. Four essential performance dimensions- cost, quality, speed, and innovation -when well done, deliver value to the customer and competitive advantage to students and their employers. In the new Seventh Edition of Management: Leading & Collaborating in the Competitive World, Bateman and Snell go a step further to discuss the advantages of leadership and collaboration as two essential means to these four "bottom line" practices that successful managers and companies must deliver to their customers. This leadership and collaboration theme is the key to successful management. People working with one another, rather than against, is essential to competitive advantage. By reinforcing these new business practices in context with the functional approaches, the authors deliver a unique theme among all principles of management texts- how to manage, lead, and collaborate in ways that deliver results.

Uncommon Causes of Stroke Dec 30 2019 Most strokes are attributed to atherosclerosis of neck and intracranial arteries, brain embolism from the heart, and penetrating artery disease; these are discussed in detail in many other books. This compendium fills an important niche by providing authoritative discussions on the other, less common causes of stroke, including various forms of angitis, coagulation disorders, infective, paraneoplastic and metabolic disorders that may be associated with stroke, and a number of rare syndromes such as Eales disease and Fabry's disease. This new edition contains detailed, up-to-date information about the nature, diagnosis, and treatment of those relatively uncommon types of cerebrovascular disease that cause strokes. It is therefore a unique scientific and clinical resource that provides a useful reference to help physicians diagnose and treat stroke patients who do not fit well into the usual clinical categories. New chapters include stroke in patients with Lyme disease, scleroderma, Cogan's syndrome, Chagas' disease, and HIV.
