WHO Guidelines on Tularaemia Apr 13 2021 Tularaemia is a bacterial zoonotic disease of the northern hemisphere. The bacterium (*Francisella tularensis*) is highly virulent for humans and a range of animals such as rodents hares and rabbits. Humans can infect themselves by direct contact with infected animals by arthropod bites by ingestion of contaminated water or food or by inhalation of infective aerosols. There is no human-to-human transmission. In addition to its natural occurrence *F. tularensis* evokes great concern as a potential bioterrorism agent. *F. tularensis* subspecies *tularensis* is one of the most infectious pathogens known in human medicine. In order to avoid laboratory-associated infection safety measures are needed and consequently clinical laboratories do not generally accept specimens for culture. However since clinical management of cases depends on early recognition there is an urgent need for diagnostic services. This first edition of WHO Guidelines on tularaemia provides background information on the disease describes the current best practices for its diagnosis and treatments in humans suggests measures to be taken in case of epidemics and provides guidance on how to handle *F. tularensis* in the laboratory. The target audience includes clinicians laboratory personnel public health workers veterinarians and any other person with an interest in zoonoses.

South and West Sep 06 2020 NATIONAL BESTSELLER • “One of contemporary literature’s most revered essayists revives her raw records from a 1970s road trip across the American southwest ... her acute observations of the country’s culture and history feel particularly resonant today.” —Harper’s Bazaar Joan Didion, the bestselling, award-winning author of *The Year of Magical Thinking* and *Let Me Tell You What I Mean*, has always kept notebooks—of overheard dialogue, interviews, drafts of essays, copies of articles. Here are two extended excerpts from notebooks she kept in the 1970s; read together, they form a piercing view of the American political and cultural landscape. “Notes on the South” traces a road trip that she and her husband, John Gregory Dunne, took through Louisiana, Mississippi, and Alabama. Her acute observations about the small towns they pass through, her interviews with local figures, and their preoccupation with race, class, and heritage suggest a South largely unchanged today. “California Notes” began as an assignment from *Rolling Stone* on the Patty Hearst trial. Though Didion never wrote the piece, the time she spent watching the trial in San Francisco triggered thoughts about the West and her own upbringing in Sacramento. Here we not only see Didion’s signature irony and imagination in play, we’re also granted an illuminating glimpse into her mind and process.

The Global Guide to Animal Protection Dec 22 2021 Raising awareness of human indifference and cruelty toward animals, *The Global Guide to Animal Protection* includes more than 180 introductory articles that survey the extent of worldwide human exploitation of animals from a variety of perspectives. In addition to entries on often disturbing examples of human cruelty toward animals, the book provides inspiring accounts of attempts by courageous individuals—including Jane Goodall, Shirley McGreal, Birute Mary Galdikas, Richard D. Ryder, and Roger Fouts—to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.

Assessing the Environmental Adaptation of Wildlife and Production Animals Dec 10 2020 Wild animals under human care as well as domesticated farm production animals are often exposed to environmental changes (e.g., capture and transportation). Short-term or acute changes in physiological indices (e.g., heart rate, respiration, body temperatures, immune cells, and stress hormonal biomarkers) provide crucial information regarding the responses of animals to novel environments, and they could provide crucial determining factors for the long-term health and welfare of animals. This

Special Issue includes experimental research papers that demonstrate the applications of physiological indices and welfare assessment methods (e.g., morphological and morphometric data, behavioural assessments, thermal profiles, and physiological markers) in any wildlife or production animal (e.g., rescued and rehabilitating animals, pets, competition animals, farm animals, and zoo animals), in response to environmental and management related factors. The goal is to provide examples of new research and techniques that can be used to monitor short- and long-term environmental adaptation of animals under human care.

Freshwater Ecology and Conservation Aug 06 2020 This practical manual of freshwater ecology and conservation provides a state-of-the-art review of the approaches and techniques used to measure, monitor, and conserve freshwater ecosystems. It offers a single, comprehensive, and accessible synthesis of the vast amount of literature for freshwater ecology and conservation that is currently dispersed in manuals, toolkits, journals, handbooks, 'grey' literature, and websites. Successful conservation outcomes are ultimately built on a sound ecological framework in which every species must be assessed and understood at the individual, community, catchment and landscape level of interaction. For example, freshwater ecologists need to understand hydrochemical storages and fluxes, the physical systems influencing freshwaters at the catchment and landscape scale, and the spatial and temporal processes that maintain species assemblages and their dynamics. A thorough understanding of all these varied processes, and the techniques for studying them, is essential for the effective conservation and management of freshwater ecosystems.
